PROFESSIONAL EXPERIENCE

FedEx - Collierville, Tennessee

Data Analyst Advisor

Sep 2022 – Current

- Drove the design and development of production finance data products in FIP, a cloud-based Azure Databricks platform that ingests Oracle Fusion data via BICC, OCI, and Azure Data Factory into layered lakehouse tables used across FedEx finance.
- Developed the underlying Databricks notebook logic for a multi-million-row curated table built from 20+ Oracle Fusion source tables that combines general ledger and subledger detail to support close, reconciliations, audit research, variance analysis, and ad hoc investigation across global regions.
- Engineered transformation logic in PySpark, Python, and SQL, including complex joins, enrichment rules, deduplication, hierarchy mapping, and business-rule standardization; also automated ingestion of account, cost center, and legal entity hierarchies from Oracle EDM into production tables.
- Led an efficiency initiative that increased refresh frequency for the close-reporting data product from once daily to four times daily, improving timeliness for downstream users and earning two Bravo Zulu awards for business impact.
- Enabled governed self-service reporting by connecting Power BI to Azure Databricks and publishing production dashboards to Power BI Service, supporting approximately 60 users with secure access controls aligned to enterprise InfoSec standards.

Senior Data Analyst

May 2020 – Sep 2022

- Engineered production automation workflows in Automation Anywhere to orchestrate data retrieval, processing, and delivery for finance close activities, reducing manual effort and supporting recurring FP&A reporting used by directors and executive leadership.
- Developed and supported production ETL processes that moved financial data into downstream reporting layers, enabling dashboards and close reports consumed by analysts and business stakeholders.
- Built a cloud-hosted internal reporting application in Dataiku, using Python backend integrations with Oracle and front-end components in HTML/CSS/JavaScript to deliver contract and financial reporting in production.
- Integrated AWS S3 with RPA and scripted workflows to replace legacy NAS-based file handling, improving scalability and operational efficiency of data distribution processes.
- Recognized with **three Bravo Zulu awards** for contributions to forecast/reporting automation, close-process RPA, and FP&A reporting enablement.

Advanced Intern – Data Analyst

Jan 2020 – May 2020

- Automated recurring data preparation and reporting workflows using Dataiku and Alteryx, reducing manual effort for FP&A processes and improving productivity for monthly forecasting and close-related reporting.
- Administered a production Tableau Server environment supporting multiple teams, including workspace management, role-based access, and dashboard distribution for financial planning and analysis use cases.
- Developed and supported Tableau reporting assets used in monthly financial reporting and close processes, while training business users on dashboard access, interpretation, and self-service usage.
- Improved query performance by approximately 20% through SQL tuning and optimization, helping accelerate reporting workflows and increase productivity across finance teams.

Finance Intern – Data Analyst

Jun 2019 – Aug 2019

- Analyzed approximately \$30M in incentive awards tied to vendor programs, evaluating the relationship between equipment incentives and downstream revenue generation to assess program ROI.
- Built regression-based statistical models with non-linear terms to identify the point at which incremental incentive spending produced diminishing marginal returns on revenue.
- Delivered data-driven recommendations on incentive efficiency and expense-to-return optimization, helping inform decision-making around vendor investment strategy.
- Produced a written analytical report and presented findings to stakeholders; work was well received and contributed to receiving a full-time offer.

Financial Data Analyst

Jan 2016 – Aug 2018

- Led the implementation of an integrated ERP platform for a family-owned baked goods business, coordinating with a third-party vendor to connect point-of-sale, production, inventory, warehouse, finance, invoicing, and special-order workflows into a unified operating system.
- Partnered with business stakeholders to define operational and financial requirements for the new system, helping digitize core processes including online invoice generation, customer order capture, raw material tracking, and production-related workflows.
- Performed pricing and demand analysis, including elasticity-based evaluations, to support pricing decisions that increased gross margin by **3.2%** and improved overall profitability.
- Built sales forecasts and purchasing plans for high-demand periods, helping manage roughly **\$325K** in raw material planning and improving inventory readiness for seasonal demand.

PROJECTS [\[LINK\]](#)

- Leveraged a CI/CD infrastructure to create and deploy my own website from GitHub [\[LINK\]](#)
- Completion Percentage Over Expectation (CPOE) utilizing Stochastic Gradient Boosting [\[LINK\]](#)
 - Predicting the completion probability of a pass to evaluate QB's ability by looking at residuals (+/-)
 - Using public data, I explained 89% of the variance of NFL Next Gen Stats' CPOE model
- Which defensive line position is the most valuable? Quantifying positional value – with S. Struthers [\[LINK\]](#)
 - Sports Info Solutions Analytics Challenge. Mentioned as one of the "highlights" of the competition [\[LINK\]](#)
- Estimating the likelihood of pass completion for each Quarterback with Logistic Generalized Additive Mixed Model [\[LINK\]](#)
- Analyzing decrease of Home Field Advantage in the NFL [\[LINK\]](#)
 - Novel approach consisting in adjusting for opponent, team strength, coaching competence, and QB's ability
- My Taxes Are Too Darn High: Why Do Households Protest Their Taxes? - B. Nathan, R. Perez-Truglia, A. Zentner [\[LINK\]](#)
 - Research assistant. Supported with web scraping and data processing

EDUCATION

The University of Texas at Dallas — Richardson, Texas

M.S., Business Analytics, Data Science Track

May 2020

Scholar of Recognition | GPA: 3.75/4.0

The University of Texas Rio Grande Valley — Edinburg, Texas

B.B.A., Finance and Economics

December 2015

Magna Cum Laude | Beta Gamma Sigma Honor Society | GPA: 3.72/4.0

CERTIFICATIONS

Certified SAFe® 6 Agilist — Scaled Agile, Inc.

Issued Sep 2025 | Expires Sep 2026

TECHNICAL SKILLS

- **Programming & Query Languages:** SQL, Python, PySpark, Spark SQL, R, JavaScript, HTML, CSS, VBS, SAS
- **Cloud, Data Platforms & Engineering Tools:** Azure Databricks, Azure Data Factory, Azure Data Lake, Oracle Fusion Cloud, Oracle Cloud Infrastructure (OCI), Oracle BICC, Oracle EDM, Dataiku, Alteryx, Automation Anywhere, Git
- **Business Intelligence & Reporting:** Power BI, Tableau, Tableau Server, Excel
- **Technical Strengths:** ETL/ELT pipelines, data transformation, data modeling, workflow automation, financial and close-process reporting, hierarchy integration, production dashboard delivery, enterprise analytics enablement
- **Analytics & Modeling:** regression, classification, clustering, PCA, ensemble methods, GAM, GAMM, mixed-effects models, forecasting
